

Dalmaray Project

A couple of years ago.....

Rob Dalmaray, President of Dalmaray Concrete Products, set out to install a new plant in his Janesville, WI operation. Twenty years after he joined the company his father started, Rob decided it was time to make the move from truck-delivered ready-mix concrete to on-site self-compacting concrete. The challenge was to find a company that could deliver a plant to fit not only their budget, but also their dream for producing SCC within two years.

Project Highlights

- SCC Production
- Consistent water-to-cement ratio—Quality Control
- Quieter, cleaner, safer operation
- Producing more products in fewer hours
- 20% increase in profits

Dalmaray Specs

- MobilMat MO 45/2-PCS with 2 discharge gates serving 2 different bays
- Automatic aggregate feeding with in-ground truck dump hopper
- Capacity for 80 tons of aggregate
- 2 Bins
- 50 ton cement silo
- Automatic mixer cleaning
- PCS computer control system
- 5 Admixture controls
- 1 moisture probe in aggregate bin

After a year long search.....

Rob made the decision to go with ACT. He chose them for a variety of reasons, the biggest one being that out of everyone he talked to, ACT was the only one that just *got it*. Throughout the project, the only surprise has been the timeframe. Instead of Dalmaray producing SCC in two years, they were mixing it within two months.

“It’s unbelievable...once you have the right equipment, it’s amazing what you can do”, says Rob. With what many consider to be the best controlling system in the industry, ACT provides precision moisture measurement, essential to the production of SCC. And because of that precision, everything about Dalmaray’s operation is smoother (and more profitable). “It’s a much more worker-friendly environment - quieter, cleaner, and safer”, Rob reports. “And, our guys get to go home on time a lot more often, which makes them happy, while we save on overtime costs - which makes us happy, too.”
